Employment History

Founder & Developer - Formity Labs

August 2024 — Present

- Developed **Formity**, a package to create **dynamic multi-step forms** in React. These forms intelligently progress based on users' responses.
- Built an **AI form builder** powered by an interactive flowchart that simplifies the creation of complex, multi-step forms.

Frontend Developer - BuildShip

March 2024 — July 2024

- Built an abstraction layer on top of **ReactFlow** to streamline the management of the application's nodes and edges.
- Engineered an MVC architecture to seamlessly connect the application's state with nodes and edges, and to translate events into model updates.

Full Stack Developer - Universal Plastic

January 2023 — October 2023

- Designed and developed the front-end and back-end of Universal Plastic's MVP, leading to the company's first investment.

Frontend Developer - Moments

July 2022 — December 2022

- Developed the website for the social network Moments, implementing intricate animations that elegantly unfold as users scroll.

Skills

- React
- Next.js
- TypeScript / JavaScript
- HTML5 / CSS3
- Tailwind CSS
- React Flow

Education

Bachelor of Computer Science, Universitat Oberta de Catalunya

September 2018 — July 2022
